

# Andreas H. W. Küpper

(203) 435-8819 · Cambridge, MA · [ahwkuepper@gmail.com](mailto:ahwkuepper@gmail.com)  
[ahwkuepper.info](http://ahwkuepper.info) · [github.com/ahwkuepper](https://github.com/ahwkuepper) · [linkedin.com/in/ahwkuepper](https://linkedin.com/in/ahwkuepper)

## Skills

---

**Programming:** Python, C, JavaScript, SQL/Hive, Fortran, R, Matlab, Shell scripting

**Tools:** Pandas, SciPy, Scikit-learn, NumPy, Matplotlib, Seaborn, Flask, Emcee, OpenMP, MPI

**Machine/statistical learning:** Logistic/linear regression, Random Forest, SVM, k-nearest neighbors, Bayesian inference modeling, Markov-Chain Monte Carlo, maximum likelihood estimation, bootstrapping/jackknife resampling, KS testing, minimum spanning tree algorithms, Gaussian mixture models, principal component analysis, kernel density estimation

**Leadership:** Mentored 8 PhD/MSc students, guiding them to publications and conference participations

**Communication:** 50+ presentations at conferences/public events and 25 [peer-reviewed publications](#)

## Experience

---

- |   |             |
|---|-------------|
| <b>Insight Data Science, Boston, MA, <i>Fellow</i></b>  | 2016        |
| <ul style="list-style-type: none"><li>• Built <a href="#">STDand.Me</a>, a web application for STD risk assessment using Flask, Bootstrap &amp; D3</li><li>• Acquired, cleaned and analyzed CDC and Census data for 3143 US counties with Pandas</li><li>• Set up a PostgreSQL database for Census data on ZIP-code level with &gt; 30,000 entries</li><li>• Trained and validated various regression models with Scikit-learn to predict STD rates</li></ul>   |             |
| <b>Columbia University, New York, NY, <i>Hubble Research Fellow</i></b>   | 2013 – 2016 |
| <ul style="list-style-type: none"><li>• Measured the mass of the Milky Way by using Bayesian inference modeling with Markov-Chain Monte Carlo, and compared <math>10^7</math> tidal stream models to observational data</li><li>• Queried data from the SDSS database and analyzed it using kernel density estimation</li><li>• Studied dark matter clumping by producing and analyzing a data set of <math>10^9</math> stream stars</li><li>• Used unsupervised learning (PCA, Gaussian mixture models) for stream classification</li><li>• Organized several large international meetings and workshops (&gt; 100 participants)</li></ul> |             |
| <b>Yale University, New Haven, CT, <i>Research Fellow</i></b>   | 2013        |
| <ul style="list-style-type: none"><li>• Developed a Bayesian framework in Python/C for statistical modeling of tidal streams</li></ul>  |             |
| <b>Universität Bonn, Germany, <i>Postdoctoral Researcher</i></b>  | 2011 – 2013 |
| <ul style="list-style-type: none"><li>• Created a now widely used <a href="#">algorithm</a> for efficient modeling of tidal streams, which reduces the time for model generation from days to seconds</li><li>• Performed maximum likelihood estimation on noisy telescope data</li><li>• Detected clumping in star cluster data using minimum spanning tree algorithms</li></ul>   |             |
| <b>Universität Bonn, Germany, <i>Graduate Student Researcher</i></b>  | 2007 – 2011 |
| <ul style="list-style-type: none"><li>• Studied the formation of tidal streams with high-performance N-body simulations</li><li>• Wrote a C library for the cleaning and analysis of large N-body datasets (many GB)</li><li>• Extracted insights from simulation data using linear/non-linear least-square fitting, k-nearest neighbor algorithms, KS testing and bootstrapping/jackknife resampling</li><li>• Published a popular open-source <a href="#">C/Fortran code</a> for generating star cluster models</li></ul>   |             |

## Education

---

- |   |      |
|---|------|
| <b>Universität Bonn, Germany, PhD in Astrophysics, <i>summa cum laude</i></b> | 2011 |
| <b>Universität Bonn, Germany, Diplom in Physics (MSc equivalent)</b>          | 2007 |
